

Contour™ herringbone parlor

Uncomprising quality and cow comfort

Designed for the shape of your cows

The distinctive shape of the Contour™ herringbone parlor, with its unique angled rump rail, follows your cows' contours to provide excellent cow positioning and comfort. In addition, top-quality materials and workmanship mean the Contour herringbone parlor from Blue Diamond Manufacturing Company looks and performs superbly in your operation.

A professional look for your professional dairy

The unique design of the Contour herringbone parlor incorporates sleek-looking performance features. The brisket rail can be made from a solid sheet of stainless or galvanized steel. Precise stall definition makes loading easier, while the solid sheet-metal construction is easy to clean with an unmistakable professional look.

Flexibility to create the right parlor for you

Your dairy is unique. Therefore, we designed the Contour herringbone parlor with many quality standard features, as well as an array of options to maximize performance and appearance. Choose all stainless-steel construction, EnCore® cabinetry, CIP cabinets, ALL-EXIT® or Exit Plus™ to assure the Contour herringbone parlor meets all your dairy's needs.

The Contour™ herringbone parlor allows you to select the options that best suit your needs, including all stainless-steel construction.

Cow comfort

The cow-conforming design and indexing system of the Contour™ herringbone parlor positions each cow comfortably and correctly. A regulated air cylinder gently moves the brisket rail, urging cows into their correct position. The rump-rail assemblies are set at a fifteen-degree angle to contour to the back of the cow, eliminating pressure on the cow's hip pins.

Operator safety

Once cows are correctly and comfortably positioned, you can work more efficiently and effectively. This parlor offers an unrestricted reach and view of the udder, making milking and udder health practices easier.

Improved efficiency

The stainless-steel components of the Contour herringbone parlor are smart looking and easy to clean. The hinges that move the brisket rail are designed to stand up to repetitive use, plus there are no steel-to-steel contact points to reduce wear. The hinges also include bushings that are quick and easy to replace. The result is a parlor that minimizes the time you need to clean and maintain it for maximum efficiency.

You can choose between conventional exit or ALL-EXIT®. With ALL-EXIT, you simply push a button and the stall raises up so cows can exit underneath.

Stall definition directs the cows to their stalls quickly and smoothly. Sheet metal construction makes the brisket rail easy to clean and gives it a smooth, professional look.

The indexing system allows for gentle and correct positioning of cows every time.

Standard Features Include:

- Formed 10-gauge Contour brisket rail with stall definition
- Two-direction indexing with adjustable index pressure
- Heavy-duty brisket-rail hinge arms with wear-resistant UHMW bushings
- Stainless-steel indexing air cylinders and controls
- Stainless-steel rump-rail assemblies with stainless-steel butt pans angled to fit the cows
- Suspended arches
- Galvanized entrance gates
- Stainless-steel exit gates
- Galvanized grates
- Wide cow-entry lanes

Options:

- Conventional exit or ALL-EXIT®

- EnCore® automation cabinetry by DeLaval
- Arm type take-offs
- EnVision®
- CIP cabinetry
- Stainless-steel skirting
- Remote start control
- Light cabinetry
- Stainless-steel brisket rail
- All stainless-steel construction
