

## DeLaval calf feeder CF1000

### A good start for your calves

#### **More than a new name and version**

DeLaval calf feeder CF1000 represents the latest generation of advanced calf feeders. The user-friendly hand held computer with clear display panel makes it very easy to control calf feeding. If the feed is cold the new IQ-heating control increases the temperature automatically, so it is always served at the correct temperature. This heating control also allows you to increase the temperature easily during cleaning.

DeLaval calf feeder CF1000 is available with either ALPRO™ or stand-alone control and you can choose from basic or premium equipment levels.

DeLaval calf feeder CF1000 with ALPRO™ connects to the ALPRO™ herd management system so you can program your specific ration and feeding plans. You can also view this data on the calf feeder's handheld terminal.

Our stand-alone calf feeder is perfect for dairy farmers who don't need to connect to another management program. Both versions of DeLaval calf feeder CF1000 can be equipped with up to four teats and four concentrate feed stations.

Connecting to a concentrate feed station makes it possible to utilize the automatic weaning function, for efficient and easy calf rearing.

The premium DeLaval calf feeder CF1000 also offers cleaning of the heat exchanger together with milk and circulation pumps.

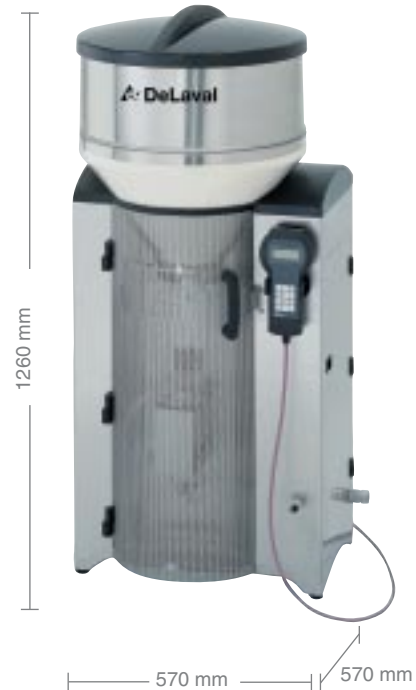

#### **Good feeding is vital to a good start in life**

Everyone aiming for healthy cows with a correct age at first calving, knows there is little margin for error. We support this focus with DeLaval calf feeder CF1000, a cost efficient tool for rearing healthy calves.

## DeLaval calf feeder CF1000

DeLaval calf feeder CF1000 – durable, low maintenance, designed to feed your calves individually.

### CF1000

Powder milk	x
Fresh milk	x
