

Cascade™ parallel parlor

Top-of-the-line performance at an economic price

An affordable parlor that delivers speed and efficiency

Today's dairy producers are always looking for ways to maximize the efficiency and productivity of their operations. The Cascade™ parallel parlor, made by Blue Diamond Manufacturing, is built to deliver the same high performance as our top-of-the-line parallel parlor with a price tag to please the most economy-minded dairy producer.

Controlled, rapid cow traffic

The Cascade parallel parlor is designed to increase the speed of cow traffic and allow smooth, free cow flow. Cows enter quickly because they have a shorter distance to walk, compared to other parlor designs. To prevent pre-loading, overlapping sequencing gates close automatically after each cow exits a stall. A wide cow entry lane lets cows enter their stalls without making a sharp turn that will slow them down.

High quality at a great value

The Cascade parallel parlor is designed and manufactured to provide years and years of service. The Cascade parallel parlor is constructed from corrosion-resistant, hot-dipped galvanized steel for heavy-duty operation. The Cascade parallel parlor also incorporates the standard features you need most, while offering the option to add features as you choose, so you have total control of your cost.

The Cascade™ parallel parlor is built from corrosion-resistant, hot-dipped galvanized steel for the strength and rigidity you need without the expense of stainless steel.

Time and labor savings

The Cascade™ parallel parlor’s design helps minimize the time you spend positioning and releasing cows. An adjustable Air Powered Index System gently moves cows back against the 10-gauge stainless-steel butt pan, to assure correct positioning without help from you. ALL-EXIT™ releases cows quickly so you can begin reloading right away.

Safety and comfort

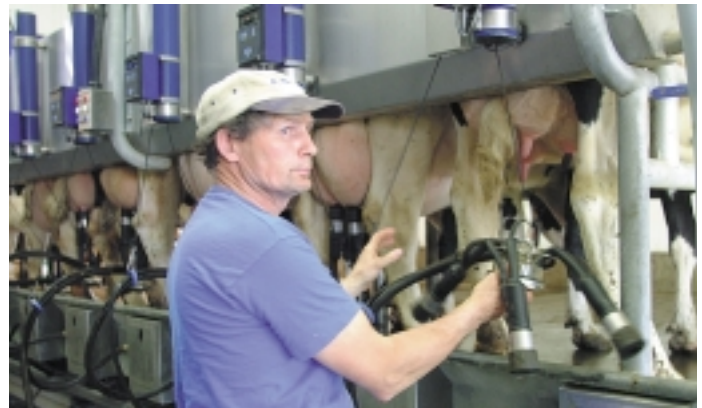

The Cascade parallel parlor was designed to protect both you and your cows. The open bottom neckrail is crafted to fit the cow’s shoulder so there’s no pressure on your cow’s sensitive areas. In addition, the Cascade parallel parlor shortens the distance between you and each udder, as well as the distance between each cow, to help minimize operator movement. Control stations are located in the milking pit for easy overall operation. The Cascade parallel parlor promotes free cow flow and comfort with features such as floor-mounted sequencing gates and smooth, rounded surfaces that reduce impact and friction.

Easy to install and maintain

The components of the Cascade parallel parlor are cut to fit, and welded on site for extra strength. The hot-dipped galvanized steel components are extremely durable and there are no steel-to-steel wear points, assuring you years of uninterrupted service.

With ALL-EXIT™ for efficient release, you can release all cows in one group.

The Cascade parallel parlor is a “workhorse” in your dairy. It installs quickly and easily, plus you can add options and features whenever you like.

The Cascade parallel parlor includes features you need to safely milk your cows, including an Air Powered Index System for correct cow positioning.

Standard Features Include:

- ALL-EXIT/All Index™
- Adjustable powered index system
- 4" aluminum duplex air cylinder
- Hot-dipped galvanized-steel construction
- Suspended 10-gauge stainless-steel butt pan with elevated gutter
- Floor mounted sequencing gates with external return springs

- Three-position open-bottom neck rail design
- Hinged entrance gate

Optional:

- Gang Exit/Gang Index
- Maestro®
- EnVision™
- CIP Cabinetry
- Upgrade to sliding entry gate

Size:

From 2 x 3
 Stall Centers: 27" (686mm)
