

Original liners

Maximize your operation's performance

The first choice for fast, complete milking

Every day, more than 20 million cows are milked with genuine Original liners from DeLaval. Original liners, especially designed for use with DeLaval original equipment, can deliver the best performance and can produce the highest volume of milk.

Maximize milk production

Your liners are the point of contact between your cows and your milking systems. Original liners can deliver greater cow comfort, faster milkout and consistent performance to help you maximize your milk production.

The choices you need to succeed

The Original liner series from DeLaval offers a choice of liners so you can match liner performance to your needs. No other liner manufacturer has the resources and the expertise to provide the quality and selection of liners you'll find from DeLaval.

The Original liner series offers a selection of specialized liners designed and manufactured to meet the individual needs of your operation.

The Harmony® Series

The Harmony® Series, designed specifically to work with the nippleless Harmony® Milking Unit, offers fast milking with the exclusive 12 mm milk tube for complete milkout.

The Harmony series includes: The Harmony 2100 (SR-2) for great all around performance with a large 12mm milk tube and straight shut off; the Harmony 2100S (SR-2) with the same great performance as the 2100 and a special reinforced shut off; the Harmony 2105 (SR-2) with a medium bore - recommended for use on cows with large or injured teats; the Harmony Plus with gentle milking action that can virtually eliminate slips.

Exclusive Delatex® Compound

All genuine DeLaval™ liners are made from our exclusive rubber compound called Delatex®. Delatex is an FDA-approved blend of natural rubber and protective ingredients that combines milking performance with resistance to the day-to-day hazards that destroy other compounds.

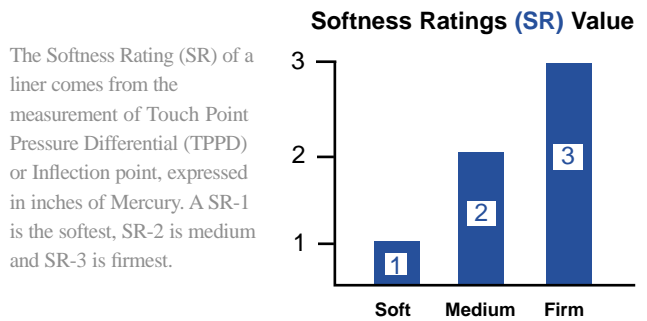

Scheduled service for peak performance

Your milking equipment works harder than any other equipment on the farm. Your liners are on the front line of that effort.

To assure timely replacement of your liners with genuine DeLaval products, call your independent DeLaval dealer today about our complete service program. DeLaval dealers are factory-trained to perform scheduled service, test and calibrate equipment and provide repair support for your entire milking system. With genuine DeLaval service and support, you can be assured peak performance for your milking system.

You can feel the difference

Original liners from DeLaval have a feel all their own. Designed for comfort and softness, you can count on Original liners to gentle care for your cows.

01 (SR-3) – For many years, the world’s best-selling and most-copied liner, the 01 features a narrow, stretch-bore design for very fast, yet gentle milkout.

01M (SR-3) – Designed to deliver the same fast, yet gentle milkout of our 01, the 01M features a specially designed head for increased holding power.

08 (SR-2) – We increased the capacity of the 08 with a large, tapered milk tube that can provide faster milk flow and gentle, clean milkout. The 08 is an all-around performer, perfect for today’s high-producing herds.

6100 (SR-1) – The 6100 has a gentle staying power that can virtually eliminate slips and falloffs in your operation. The bore design is gentle on teats while providing good support for fast, complete milkout.

Also included in the Original Liner series: The 05 (SR-2) has a medium bore and is recommended for use on cows with large or injured teats; the 03 (SR-1) three-piece stretch mouthpiece liner features a higher natural rubber compound and adjustable lips, making it the choice of the West Coast dairy producer.
